

The MedBen Administrators Outcomes Preferred Drug List defines the copayment tier status of “preferred” medicines most commonly prescribed for members. It may not include all drugs covered by your prescription drug benefit and “Non-Preferred” or Tier 3 medicines do not appear. For benefit coverage or restrictions please check your benefit plan document(s). This listing is revised from time to time as new drugs and new prescribing information becomes available.

It is recommended that you have this list of medications available when you are with your physician and a prescription drug is going to be part of the treatment for a clinical condition.

**Key to Notations:**

**PA:** Prior authorization to ensure clinical appropriateness of this or previous therapy with other similar medications may be needed before claims for one of these medications will be accepted.

**ST:** A step therapy protocol may apply to this medication. Claims for this medication may be covered based on the enrollee's previous medication history. If prior medication history does not meet clinical guidelines, authorization may be required prior to acceptance of claims.

**QL:** Quantity limitations (maximum number of tablets/capsules, etc. per month or year) may be applied to this medication.

**SPECIALTY DRUGS**

Coverage for "Specialty Drugs" varies from plan to plan. Your prescription benefit may not cover some or all of these items. Please check your pharmacy benefit information if you have questions.

Specialty Drugs are "bioengineered" oral or injectable medicines that target and treat complex medical conditions including: blood disorders, cancers, infertility, hormone or enzyme deficiencies, multiple sclerosis, rheumatoid arthritis, and a growing list of obscure or "orphan" diagnoses. Most plan sponsors will apply "step edits" or prior authorization criteria prior to the dispensing or administration of a specialty drug. These requirements ensure appropriate use of a specialty drug
